AB - JP2002336635 NOVELTY - A sheet-like desiccant (1) has a non-woven fabric (2) containing high water absorbing fiber. A moisture permeable non-water permeable film (3) having water-vapor permeability of 50-6000 g/m<sup>2</sup>.24 hours is laminated on one surface of non-woven fabric. A non-water permeable film (4) having water-vapor permeability of less than 50 g/m<sup>2</sup>.24 hours, is laminated on the other surface of non-woven fabric.

- DETAILED DESCRIPTION - A sheet-like desiccant has a non-woven fabric containing a high water absorbing fiber. A moisture permeable non-water permeable film having water-vapor permeability of 50-6000 g/m<sup>2</sup>.24 hours, is piled on one surface of non-woven fabric. A moisture permeable non-water permeable film having water-vapor permeability of 50-6000 g/m<sup>2</sup>.24 hours or a non-water permeable film having water-vapor permeability of less than 50 g/m<sup>2</sup>.24 hours, is laminated on the other surface of non-woven fabric. The periphery edge of the laminate obtained is joined.

- USE - For use in packaging industry for preservation of metal components such as precision equipment, electronic components, pharmaceuticals and foodstuffs.

- ADVANTAGE - The sheet-like desiccant has good moisture absorption such as desiccants comprising deliquescent salts, and can be made into arbitrary shapes. The sheet-like desiccant has high industrial utility.

- DESCRIPTION OF DRAWING(S) - The figure shows cross-sectional view of sheet-like desiccant.

- Sheet-like desiccant 1

- Non-woven fabric 2

- Moisture permeable non-water permeable film 3

- Non-water permeable film 4
